AUTHORITATIVE SCIENTIFIC PUBLICATIONS SERIES

The IARC Monographs are the authoritative encyclopaedia on environmental carcinogens, which serves governments to inform their preventive actions.

The IARC Handbooks of Cancer Prevention are major references for public health intervention and the development of cancer control strategies.

THE KNOWN CAUSES OF HUMAN CANCER BY ORGAN SITE

IARC Monographs, Agents classified in Group 1 and IARC Handbooks of Cancer Prevention, Interventions with a cancer-preventive effect
The burden of cancer is rising markedly worldwide, with estimates indicating that by 2050 there will be double the current number of about 14.1 million new cases per year. The majority of this increase is expected in low- and middle-income countries.

The mission of IARC is the global control of cancer, with emphasis on primary and secondary prevention, which is the most effective response to the rising burden of cancer, particularly in low- and middle-income countries where health services are least able to meet the impending challenge.

The first step in cancer prevention is to identify the causes of human cancer and what works in cancer prevention. In accordance with one of its fundamental missions, the Agency prepares and distributes authoritative information on the causes and prevention of cancer throughout the world.

All Monographs and Handbooks in PDF format can be downloaded from our websites.
